PRODUCT GUIDE

X CALIBUR™
HI-TEK TACKLE

**THE TECHNOLOGY IS ADVANCED.
THE REASON IS SIMPLE.**

PUT MORE FISH IN THE BOAT.

The new XCalibur™ Hi-Tek Series is super-tuned and sharply dressed. Our engineers gave this series a host of deadly upgrades to ensure solid fish-catching performance every time.

WANT REALISM? The flawless, high-sheen finishes jump to life with intricate etched detail. Red three-dimensional eyes enhance the attraction. And in the water, these baits are perfection in motion. Their shapes and swimming motions were optimized using computer-aided analysis and intense underwater observation. Each bait is equipped with premium hardware, including our Tx3 Trebles with VMC InLine Technology.

XCalibur Hi-Tek Tackle™ is proud to introduce hardbait innovation designed to put consistent limits of fish in the boat.

Tx3 TREBLES WITH VMC® INLINE TECHNOLOGY™. We're giving fishermen the edge on the water this season – three of them,

in fact. The Tx3 hook point has three razor-sharp cutting edges for the ultimate in penetrating efficiency. The hook points are forged, instead of chemically sharpened, which dramatically improves durability. They're then retouched with a coning process that serves double-duty to boost point integrity and smooth the cutting surfaces. Tx3 Trebles slice with minimal friction and stand up to serious abuse.

VMC InLine Technology places one barb of the hook in-line with the hook eye. The front hook rides with one point perpendicular to the bait and the other two straddling its body. This design promotes truer running characteristics and reduced hang-ups.

BECAUSE THE TIME FOR A WAKE-UP CALL HAS ARRIVED – Masterfully engineered to swell the surface and push out a broad wake as it wobbles aggressively right at the surface, the Xw6 Wake Bait draws fish from afar and elicits violent strikes. Staying true and riding high at all speeds while calling out with loud rattles, this Hi-Tek bait triggers a big bass' built-in aggressiveness.

THE QUICKEST WAY to be a master of poppin' and chuggin'? Fish a bait designed by the world's finest topwater fisherman, Zell Rowland. He hand-carved the prototype that became the Zell Pop. It spits with the slightest twitch and sits tail down to bring the big boys crashing to the top. We put Zell's name on the bait. He puts bass in the boat.

SIMPLY IMPOSSIBLE TO FISH

WRONG. This lipless crank brings them in from far off with super-loud rattles and a tight, precision-tuned wiggle. It casts like a bullet and emits an awesome amount of vibration at a death-cry-of-a-minnow pitch. Etched detail and a high-sheen finish make them a sure sell in big bass territory.

THE LEGEND OF XCALIBUR'S Tx3 HOOKS

began in Florida. Word quickly spread that a heavy-wire hook had finally been designed to withstand the state's legendary bass. Soon, anglers across the country and Canada discovered each of XCalibur's Tx3 series of hooks presented an advantage they hadn't been able to find for their particular application. XCalibur, in the course of one year, quickly raised even the most critical of eyebrows thanks to Tx3's sharp and durable three-sided cutting point.

XCalibur Tx3 hooks feature the Tx3 hook point. This three-sided cutting point is extremely sharp and durable. XCalibur's Tx3 rotating treble hooks feature a 6° counter-rotating shaft designed to help the hook penetrate with minimal force. These trebles have proven to be extremely effective at hooking and holding jumping or hard-charging fish.

Bass anglers have been equally impressed with XCalibur Tx3 Wide Gap Worm Hooks. Whether light-wire or X-strong, these hooks have proven to increase hook-up ratios in any fishing situation, from flippin' to Carolina rigging. Anglers across the board are realizing the potential of the Tx3 technology. If not, they're missing the point – literally.

XCALIBUR OFFERS THE FINEST TERMINAL TACKLE TODAY. Extensive research and development has led to technologically advanced terminal tackle components. XCalibur's Tear Drop Split Rings are designed to eliminate the opportunity for a knot to slip into the gap and become frayed. This unique design also allows the angler to enhance the action of crankbaits and jerkbaits by using either the wide or narrow end of the split ring as a pull-point. XCalibur has also made it easier and more time efficient to change lures by using the XCalibur Hold-Tite Snaps. These snaps are non-corrosive and very reliable in any fishing condition. A best kept secret of the pros is the use of rattles. XCalibur Rattles produce realistic sounds that are guaranteed to catch the attention of predator gamefish. XCalibur spares no expense in providing the finest terminal tackle to anglers, proving that to XCalibur, at least, the little things matter the most.

LEAD IS DEAD. Lure companies are facing the eventuality of lead bans throughout Canada and the United States. Some states, such as New York, have already banned the use of lead in recreational fishing. More lead bans are certain to come. XCalibur, however, is ready for change. XCalibur Tg Weights, the most technologically advanced weights available today, provide an environmentally safe alternative to lead. Comprised of tungsten, the second hardest substance next to diamond, XCalibur Tg Weights do not add pollutants to water, our most precious resource. XCalibur Tg Weights offer an important bonus – they are much more effective than lead. Tungsten weights are 25 percent smaller and much more sensitive than lead. Anglers have always been on the leading edge of environmental activism and care; XCalibur provides a safe alternative to lead that contains superior fishing attributes, making the terminal choice that much easier in a time of change.
